

SOLUTION FOCUSED. SERVICE DRIVEN.

AdBlue  
Dispensers

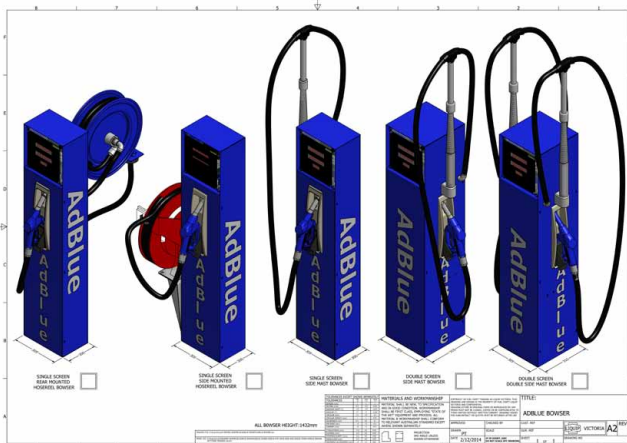

# AdBlue Dispensing Solutions

Three outstanding options to safely dispense, monitor and manage your AdBlue

When it comes to delivering AdBlue dispensing bowser solutions our speciality is the customised development, design and installation of:

- > Commercial AdBlue Dispensing Systems,
- > Retail AdBlue Dispensing Systems and
- > Road Tanker AdBlue Dispensing Systems.

We also have access to a number of pre-made AdBlue Dispensing Systems we can supply and install. All our AdBlue Pumping Systems can be configured to be NMI certified for approved resale use or set up to be non-retail dispensers with the addition of industry leading meters and associated delivery equipment parts.

To discover more about our services, products and projects please visit [www.liquipvictoria.com.au](http://www.liquipvictoria.com.au)

### RETAIL ADBLUE DISPENSING SYSTEMS

Our Retail AdBlue 240 Volt dispensers come in an all stainless steel cabinet, and are coupled with an NMI approved meter to allow it be used for AdBlue sales. These dispensers are robust, highly visible in the mandatory AdBlue colour livery and offer a small footprint solution, allowing them to be used for new or retrofit applications.

The small foot print (only 315 x 315 mm) is designed for installing in between existing fuel pumps or close to canopy poles or other smaller areas often found on existing service station sites where other standard large dispensers have taken up the space.

Our unique design can be installed directly onto concrete or similar surfaces so that power, data and product piping can be accessed directly into the side of the dispenser, which provides a very economical solution, especially when costed against excavating concrete to achieve an install. Alternatively, the AdBlue dispenser can be installed on a sump to access underground piping and wiring if you require.

### COMMERCIAL ADBLUE DISPENSING SYSTEMS

Our own designed and manufactured AdBlue 240 Volt dispensers, with full Stainless steel cabinet, are made to be installed remotely to the tank or integrated into the tank package.

There are a number of configurations to choose from:

- > Standard dispenser with single 5 metre hose and display.
- > Dispenser with dual hose and dual display.
- > Optional Hose reel with 8 metres of hose.
- > Hi Masts – 4 metre hose masts with 8 metre hoses.
- > Hazardous area approved option.

Standard with all AdBlue dispensing solutions are quality pumps, flow meters and equipment accessories.

### ROAD TANKER ADBLUE DISPENSING SYSTEMS

These custom designed and manufactured bulk AdBlue dispensing systems for road tankers or ISO containers, are engineered to be mounted underneath the tanker belly, behind the vehicle cabin or on the container twist locks at the rear of an ISO containers Skel trailer.

Powered by a diesel engine, the pump delivers fast unloading of bulk tanks through a hose reel and drybreak connection. A retail system can be coupled with an NMI approved meter to allow the sale of AdBlue or if required a non-retail dispensing package can also be fitted.

All systems use high quality stainless steel components, meters and valves and are all installed in an enclosure to protect and provide a quiet operating solution.

For more detailed information or to order any of AdBlue dispensing bowser solutions please call or e-mail Liquip Victoria today.
